## PROFESSIONAL SUMMARY

High-performing Backend Java Engineer with expertise in Spring Boot 3, Java 21 Virtual Threads, PostgreSQL, Redis, and Spring AI. Highly proficient in AI-assisted software engineering workflows (Cursor, Claude Code, Antigravity) to maximize development velocity and code maintainability. Proven track record of architecting event-driven microservices with Apache Kafka and optimizing database execution plans for 40% query latency reduction.

## TECHNICAL SKILLS

**Backend & Core Java:** Java 21, Java EE, Spring Boot 3, Spring Security, RESTful APIs, gRPC, OAuth2, WebSocket

**AI-Assisted Development:** Spring AI, AI-Assisted Coding (Cursor, Claude Code, Antigravity)

**Databases & Caching:** PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Schema Indexing & Query Tuning

**Cloud & Microservices:** Docker, Apache Kafka, AWS (EC2/RDS/S3), Cloudflare R2, Git

## PROFESSIONAL EXPERIENCE

### Full Stack Engineer - VSirius Joint Stock Company

Feb 2026 - Aug 2026

- Developed high-performance backend **RESTful APIs** and data services for QuanQuen F&B platform (quanquen.com), building core business modules for real-time table ordering, invoice generation, and menu management.
- Optimized database access layers and query execution strategies, maintaining high throughput and low latency under peak operational traffic.
- Leveraged **AI coding tools (Cursor, Claude Code, Antigravity)** to accelerate API design, unit test creation, and code refactoring by **30%**.

### Software Engineer - UNICCS Viet Nam Co., Ltd.

Jun 2025 - Feb 2026

- Engineered enterprise software solutions and database schemas in **Java EE & JavaScript** for major Japanese retail clients (Don Quijote / Donki), handling high-concurrency inventory & transaction workflows.
- Optimized complex **SQL queries** and **PostgreSQL** indexing strategies, reducing average data retrieval latency by **40%** across reporting modules.
- Automated deployment workflows for **AWS EC2 & RDS** environments, cutting release deployment lead time from 30 minutes to under **5 minutes**.

## KEY PROJECTS

### Dev\_Edu Platform (Java 21, Spring Boot 3.5, PostgreSQL, Redis, Elasticsearch 8, Apache Kafka, Docker, Cursor)

Full-stack online developer education and assessment platform with interactive video lectures, quiz auto-grading, and full-text search.

- Architected high-throughput backend services using **Java 21 & Spring Boot 3.5** for real-time quiz examination and course management.
- Reduced full-text search latency to under **50ms** using **Elasticsearch 8** and **Redis 7 + Caffeine** multi-level caching.
- Implemented event-driven student progress analytics using **Apache Kafka** event streams for real-time tracking metrics.

## **E-Commerce Platform** (Java 21, Spring Boot 3, Spring AI, PostgreSQL, Apache Kafka, Redis, gRPC, Docker, Cursor)

High-throughput e-commerce system built on microservices architecture with domain-isolated services, Kafka event streaming, and gRPC.

- Decoupled transaction processing via **Apache Kafka** event streams with Saga orchestration, maintaining zero message loss under peak traffic.
- Integrated **Redis caching** and strategic **PostgreSQL B-Tree indexing**, reducing redundant database hits by **65%** and API latency by **60%**.
- Implemented high-efficiency inter-service communication using **gRPC over HTTP/2** and central OAuth2 authentication.
